

## DuPont™ ArmorWall™ Systems Benefits

# Panelization

---

### Fast-Track Your Project with ArmorWall™ Systems

DuPont™ ArmorWall™ Systems were designed to be the perfect sheathing material for panelized projects. Panelizing ArmorWall™ Systems enables general contractors and installers to yield even greater savings than they do with standard ArmorWall™ Systems installations. Though traditional ArmorWall™ Systems installations require as little as one revolution around a building, panelized projects with ArmorWall™ Systems often do so even faster, safer and more cost effectively, with less labor.

#### Benefits of Panelizing ArmorWall™ Systems

- ArmorWall offers a single prefabricated system that can be delivered on-site and installed in days, not weeks
- Reduces the common stresses of factory-built wall assembly manufacturing, including movement within the facility, deflection during transportation, and racking during wall erection
- Passes NFPA 285 and arrives to the job site with a one or two-hour fire rating
- Pre-applied air and water-resistive barrier shortens factory drying time, reducing the number of days each panel takes to manufacture
- Reduces the number of structural supports needed, thus removing more material from the project
- Improves structural performance and provides an alternative solution to typical block and plank construction

- Single prefabricated system
- As little as one building revolution to install
- Work faster, safer, and cost-effectively
- Reduced labor and inspections
- Less physical space required on the jobsite
- Enhanced energy savings
- Reduced construction waste
- Improves structural performance
- Provides innovative, alternative solution to block and plank construction
