

Sealing Cladding Attachments

Over DuPont™ Thermax™ Wall System

When installing rainscreen attachment systems through the DuPont™ Thermax™ Wall System*, it is important to ensure the system remains water tight. DuPont Performance Building Solutions is committed to providing with the best guidance for use of our products based on tested results.

Through rigorous testing of a variety of products and configurations, including air infiltration, pressurized water, structural pressurizing, and thermal stressing, we’ve compiled our latest recommendations on how to properly seal rainscreen cladding attachment systems to ensure long term water holdout.

TABLE 1: Thermax™ Wall System Sealing Options Summary

⁽¹⁾ "Cured" - Flashing is applied along the stud lines and cured at least 24 hours prior to fastening cladding attachment. This can be done at the same time the insulation board joints are sealed.

⁽²⁾ "Wet" - Flashing is wet applied under the attachment system. This can be applied directly to the attachment system before setting it and fastening to the wall.

⁽³⁾ "on Fasteners" - Flashing is wet applied to each cladding attachment fastener after cladding attachment is fastened to the wall.

⁽⁴⁾ Knight Wall attachments are registered and trademarked by Knight Wall Systems. Follow all manufacturer installation guidelines.
